Experience

Software Development Engineer I Jan 2025 – Mar 2026
Amazon Web Services (AWS), RDS Team *Toronto, ON*

- Implemented core Java logic for a synchronous RDS instance-configuration API with DynamoDB persistence and CloudWatch instrumentation; implementation approved ahead of integration.
- Resolved **25+ production incidents** for a metrics ingestion service through on-call triage, runbook mitigations, and follow-up fixes to prevent recurrence.
- Remediated stale CloudFormation deployments across **60+ AWS accounts** by auditing stacks, removing failed or obsolete resources, and redeploying infrastructure.
- Developed a local telemetry load-testing prototype with a **10,000+ TPS design target**; added ECS task-health and CPU monitoring to investigate bottlenecks.

Software Developer Intern Apr – Aug 2020; Apr – Aug 2021
Tangerine Bank *Toronto, ON*

- Developed Java web application components and optimized SQL queries and indexes to improve response times.
- Reduced deployment errors by **20%** through Docker configuration improvements and Kubernetes deployment support; reduced build errors by **50%** through Maven automation and CI improvements.

Projects

JobRelay — Asynchronous Job Processing Source

- Built a TypeScript/Express image-processing service with PostgreSQL, Redis, and BullMQ; implemented a transactional outbox to durably accept jobs during Redis outages and dispatch them after recovery.
- Implemented idempotent submissions, bounded retries with exponential backoff and jitter, and worker-crash recovery; built a live dashboard for job status, attempt history, and fault injection.
- Added integration tests for duplicate delivery, Redis outages, and real worker termination; benchmarked **76.3 completed jobs/sec** at concurrency 4 in a local 40-job synthetic-image run.

Ascend — Accountability Tracker Live | Source

- Built a React tracker with API Gateway, Lambda, and DynamoDB single-table access patterns; implemented Cognito JWT authorization and a restricted public read-only API; provisioned infrastructure with AWS CDK.
- Built a Gmail OAuth workflow that processes up to **50 emails per scan**, uses Claude to extract job-application details from metadata, and supports review of deduplicated results before import.

On-Call Debugging Assistant *AWS Lambda, Web App*

- Won **1st place** in a **3-day AWS RDS Toronto hackathon** with a team-built troubleshooting tool that converted ticket IDs into guided diagnostic flows backed by **3 playbooks**.

Technical Skills

Languages: Java, Kotlin, Python, SQL, JavaScript, TypeScript
Frameworks & Data: Spring Boot, React, Node.js, Express, PostgreSQL, Redis, BullMQ, REST, GraphQL
AWS: RDS, DynamoDB, Lambda, API Gateway, Cognito, ECS, CloudWatch, CloudFormation, CDK
Tools: Docker, Kubernetes, Git, CI/CD, Linux, Maven, JUnit, Vitest

Education

York University Class of 2024
Bachelor of Science Honours in Computer Science *Toronto, ON*
