EXPERIENCE

Software Development Engineer I

Jan 2025 – Jan 2026

Amazon Web Services (AWS), RDS Team

Toronto, ON

- Implemented core Java business logic for a synchronous RDS instance-configuration API, including DynamoDB persistence and CloudWatch instrumentation; implementation approved ahead of integration.
- Resolved **25+** **production incidents** for a metrics ingestion service through on-call triage, runbook mitigations, and follow-up fixes to prevent recurrence.
- Remediated stale CloudFormation deployments across **60+** **AWS accounts** by auditing stacks, removing failed or obsolete resources, and redeploying to restore consistent infrastructure.
- Developed a local load-testing prototype for a distributed telemetry service with a **10,000+ TPS design target**; added ECS task-health and CPU monitoring to investigate performance bottlenecks.
- Automated KPI extraction for engineering business reviews and refactored CloudWatch dashboards to stay within service limits, reducing manual reporting work.

Software Developer Intern

Apr – Aug 2020; Apr – Aug 2021

Tangerine Bank

Toronto, ON

- Developed Java web application components and optimized SQL queries and indexes to improve response times.
- Reduced deployment errors by **20%** through Docker configuration improvements and support for Kubernetes deployments.
- Reduced build errors by **50%** by automating Maven build tasks and improving CI reliability.

PROJECTS

Ascend — Accountability Tracker

[Live](#) | [Source](#)

- Built a full-stack tracker with React, API Gateway, Lambda, and DynamoDB; designed single-table access patterns using partition keys and sort-key prefixes to retrieve tracker entries without scans.
- Implemented Cognito JWT authorization and a separate public read-only API with a fixed owner partition key and server-enforced tracker whitelist; provisioned backend infrastructure with AWS CDK.
- Built a Gmail OAuth workflow that processes up to **50 emails per scan**, uses Claude to extract job-application details from metadata, and lets users review deduplicated results before importing.

On-Call Debugging Assistant

AWS Lambda, Web App

- Built an internal troubleshooting tool with a team during a **3-day AWS RDS Toronto hackathon**; converted ticket IDs into guided diagnostic flows backed by **3 playbooks**.
- Won **1st place** for a tool designed to help engineers identify debugging steps and mitigations during incident triage.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, SQL, JavaScript, TypeScript

Frameworks & APIs: Spring Boot, React, Node.js, REST, GraphQL

AWS: RDS, DynamoDB, Lambda, API Gateway, Cognito, ECS, CloudWatch, CloudFormation, CDK

Tools & Infrastructure: Docker, Kubernetes, Git, CI/CD, Linux, Maven, JUnit

EDUCATION

York University

Bachelor of Science Honours in Computer Science

Class of 2024

Toronto, ON
